## **Amendments to the Claims:**

This listing of claims will replace all prior versions, and listings, of claims in the application:

## **Listing of Claims:**

- 1. (Previously Presented) A magnetic field transducer comprising:
- a phase transition material exhibiting a change from an antiferromagnetic phase to a ferromagnetic phase when heated above a critical temperature;
- a magnetic field source for applying a magnetic bias field to the phase transition material; and
- a heat source for heating the phase transition material above the critical temperature;

wherein the phase transition material comprises a first section and a second section, and wherein the first section and the second section are separated to form a gap.

- 2. (Original) The magnetic field transducer of claim 1, wherein the phase transition material is selected from a group consisting of: FeRh, and FeRhX, where X is one of Pd, Pt, Ir, Ru, Re or Os.
- 3. (Original) The magnetic field transducer of claim 1, wherein the phase transition material comprises a rare earth/transition metal alloy.
  - 4. (Canceled)
- 5. (Original) The magnetic field transducer of claim 1, wherein the magnetic field source comprises:
- a conductor for applying the magnetic bias field to the phase transition material.
- 6. (Original) The magnetic field transducer of claim 1, wherein the heat source comprises:
  - a source of electromagnetic radiation; and
- a waveguide for directing electromagnetic radiation from the source onto the phase transition material.

- 7. (Original) A magnetic recording head including a write pole comprising the transducer of claim 1.
- 8. (Original) A disc drive comprising:
  a motor for supporting a storage medium;
  the magnetic recording head of claim 1; and
  an arm for positioning the magnetic recording head adjacent to the storage medium.
- 9. (Previously Presented) A method of producing a magnetic pulse, the method comprising:

providing a phase transition material, wherein the phase transition material comprises a first section and a second section, and wherein the first section and the second section are separated to form a gap;

applying a magnetic bias field to the phase transition material; and heating the phase transition material to cause the phase transition material to change from an antiferromagnetic phase to a ferromagnetic phase, thereby producing a magnetic pulse.

- 10. (Original) The method of claim 9, wherein the phase transition material comprises FeRh or FeRhX, wherein X is selected from the group of Pd, Pt, Ir, Ru, Re or Os.
- 11. (Original) The method of claim 9, wherein the phase transition material comprises a rare earth/transition metal alloy.
  - 12. (Canceled)
- 13. (Original) The method of claim 9, wherein the step of applying a magnetic bias field to the phase transition material comprises:

passing an electric current through a conductor to apply the magnetic bias field to the phase transition material.

14. (Original) The method of claim 9, wherein the step of heating the phase transition material comprises:

directing an electromagnetic wave onto the phase transition material.

15. (Previously Presented) A method of recording data in a storage medium, the method comprising:

placing a phase transition material adjacent to a surface of the storage medium, wherein the phase transition material comprises a first section and a second section, and wherein the first section and the second section are separated to form a gap;

applying a magnetic bias field to the phase transition material;

heating the phase transition material to cause the phase transition material to change from an antiferromagnetic phase to a ferromagnetic phase, thereby producing a magnetic pulse; and

using the magnetic pulse to affect the magnetization of the storage medium.

- 16. (Original) The method of claim 15, wherein the phase transition material comprises FeRh or FeRhX, wherein X is selected from the group of Pd, Pt, Ir, Ru, Re or Os.
- 17. (Original) The method of claim 15, wherein the phase transition material comprises a rare earth/transition metal alloy.
  - 18. (Canceled)
- 19. (Original) The method of claim 15, wherein the step of applying a magnetic bias field to the phase transition material comprises:

passing an electric current through a conductor to apply the magnetic bias field to the phase transition material.

20. (Original) The method of claim 15, wherein the step of heating the phase transition material comprises:

directing an electromagnetic wave onto the phase transition material.

- 21. (Previously Presented) A recording head for use with a data in a storage medium, the recording head comprising:
- a write pole including a phase transition material, wherein the phase transition material is divided into two sections;
  - a return pole magnetically coupled to the write pole;

- a magnetic field source for applying a magnetic bias field to the phase transition material; and
- a heat source for heating the phase transition material to cause the phase transition material to change from an antiferromagnetic phase to a ferromagnetic phase, thereby producing a magnetic pulse that can affect the magnetization of the storage medium, wherein the magnetic pulse is produced between the two sections.
- 22. (Original) The recording head of claim 21, wherein the phase transition material comprises FeRh or FeRhX, wherein X is selected from the group of Pd, Pt, Ir, Ru, Re or Os.
- 23. (Original) The recording head of claim 21, wherein the phase transition material comprises a rare earth/transition metal alloy.
  - 24. (Canceled)
- 25. (Original) The recording head of claim 21, wherein heat source comprises:
  - a source of an electromagnetic radiation; and
- a waveguide for directing the electromagnetic radiation onto the phase transition material.
- 26. (Currently Amended) A recording head for use with a data in a storage medium, the recording head comprising:
  - a write pole including a phase transition material;
  - a return pole magnetically coupled to the write pole;
- a transmission line positioned adjacent to the phase transition material, wherein current flowing in the transmission line applies a magnetic bias field to the phase transition material; and
- a heat source for heating the phase transition material; to cause the phase transition material.

wherein the phase transition material comprises FeRh or FeRhX, wherein X is selected from the group of Pd, Pt, Ir, Ru, Re or Os.

- 27. (Canceled)
- 28. (Canceled)

Application No. 10/718,430 Amendment dated April 25, 2007 Reply to Office Action of March 27, 2007

29. (Previously Presented) The recording head of claim 26, wherein the write pole includes a tapered portion connected to the phase transition material portion.
